

## Current News

30 January 2017 a online Walk-through is now as part of our standard MS-Access Webcontrols framework

We are happy to announce that in our MS-Access Webcontrols standard framework we have implemented as brand new Walk-through function. Here the user can learn how to use the converted MS-Access database web interface in just 5 minutes. This saves implementation time and cost.

The Walk-through area is separated from the rest of the application, the user can add/edit or delete records as a training purpose without any risk or impact to any live data.
