Leading software firm Antrow has assured an easy and affordable solution to larger MS-Access database with its premier MS-Access database to web conversion service that is 70 percent faster to the contenders. Expanding MS-Access Database is any day a glitch forcing many businesses to hire pricey IT Consultants for new hardware and larger databases. But not any more! Top software company Antrow has assured a more affordable and effective solution to the problem now with its industry-leading MS-access database migration to the web. The company has recently created a stir in the tech world by providing an extremely economical migration that is as much as 70% faster compared to the competitors. One of the best parts of MS-access database conversion to the web is that it enables the users to use the database on any device, including tablet or mobile or PC. Antrow has promised no compromise with the data and functionality of the database due to the conversion service. The converted database can be accessed from anywhere in the world with an internet connection. "We know outgrowing MS-Access database is a problem for any business but you don't need to hire expensive developers to solve the problem. We aim to be your trusted partner here with our MS-Access database migration service where we will convert your database into web in a much quicker and cost-effective way. And yes, we can do it 70% faster than our contenders. We will support you with a modern website bustling with the same familiar functionality of your existing MS-Access database. The only thing is that it would be 'online' so that you have the facility to use it, edit it or delete it from just anywhere in the world", stated the leading spokesperson from Antrow. The current leader in MS-Access conversion, the company holds over 15 years of experience in converting 500+ MS-Access databases to fully-functional websites and/or cloud solutions. Antrow is known for highly affordable one-to-one migration with its own proprietary .Net MS-Access framework and conversion tools. "We will convert your entire database to an Oracle Server or Microsoft SQL server/DB2/My-SQL server. All your MS-Access Forms, Export and Report would be smoothly migrated into an advanced web design and the web application can be easily hosted in Cloud or your local network. There is no need of distribution of software & Office licenses to access the converted database. As we work with our own framework we are able to help our clients with competitive rates. Moreover, the version 2 of our latest .Net MS-Access web-controls enables us to provide a faster service with the same functionality as of the desktop application of MS-Access database. One of the best parts about our service is that we design the converted website with convenient cross platform functionality so that it can easily run on any browsing device. Our website also supports touchscreen functionality for further convenience of the users." Antrow now also supports all the major cloud solutions like AWS (Amazon web services), Microsoft Azure and Google Cloud services.
