

Problems with a local database

- The data can not be shared outside the local network
- The database can only be used on Windows system

Antrow Software develops database based Websites

Migrate MS-Access to a Website

We specialize in converting your Microsoft Access database to the Web

What you will receive from us is a modern website with the same functionality as your current MS-Access database, the only difference !! it is online

and can be used anywhere on any device. you can add, edit and delete data from anywhere in thw world. the only thing you need is a internet connection.

ANTROW software has converted over 500 MS-Access databases to the web, with our long time experience and our own developed conversion tools (Anrow .Net MS-Access webform usercontrols™) we ensure a fast and cost effective migration up to 70% faster than our competitors.

Key benefits

We convert all your existing data to a Microsoft SQL server/DB2/My-SQL server or Oracle server

Your MS-Access Forms, Reports, Export will be converted one to one into a new modern web design

Your new web application can be hosted in the Cloud or in your local network

You can control the users access to the database with our standard user rights assignments module (Free of charge)

No distribution of software or Office licenses needed anymore

The converted website can run on any device (Windows/Android/Mac/Phone/Iphone/Tablet)

You can access your data and reports anywhere and anytime

The website supports touch screens

If you are interested in our migration service or have any questions please contact us
